Status	Finished
Started	Friday, 30 October 2026, 10:02 PM
Completed	Friday, 30 October 2026, 10:13 PM
Duration	10 mins 45 secs
Grade	**14.00** out of 15.00 (**93.33**%)

Question **1**

Correct

Mark 1.00 out of 1.00

What is the best-case time complexity of linear search?

a. O(1) ✓
b. O(log n)
c. O🥎
d. O(n log n)

Question **2**

Correct

Mark 1.00 out of 1.00

Finding the location of a given item in a collection of items is called

a. Finding
b. Mining
c. Searching ✓
d. Discovering

Question **3**

Correct

Mark 1.00 out of 1.00

What is the key characteristic of binary search?

a. It always starts from the beginning of the list
b. It can be applied only if the list is sorted ✓
c. It compares elements sequentially
d. It works on unsorted lists

Question **4**

Correct

Mark 1.00 out of 1.00

Which of the following is not a limitation of binary search algorithm?

a. There must be a mechanism to access middle element directly

b. Binary search algorithm is not efficient when the data elements more than 1500 ✓

c. Requirement of sorted array is expensive when a lot of insertion and deletions are needed

d. Must use a sorted array

Question **5**

Correct

Mark 1.00 out of 1.00

In binary search, if the target element is less than the middle element, where does the search continue?

a. In the entire list

b. In the left sublist ✓

c. In the right sublist

d. At the beginning of the list

Question **6**

Correct

Mark 1.00 out of 1.00

Which of the following is a limitation of binary search?

a. It does not work with negative numbers

b. It is slower than linear search for small lists

c. It can only be applied to large lists

d. It requires the list to be sorted ✓

Question **7**

Correct

Mark 1.00 out of 1.00

What happens when the element is found in linear search?

a. The search starts over from the beginning

b. The search backtracks to find duplicate elements

c. The search continues until the end of the list

d. The search stops immediately ✓

Question **8**

Correct

Mark 1.00 out of 1.00

What is the advantage of binary search over linear search?

a. Binary search works on unsorted lists

b. Binary search does not require dividing the list

c. Binary search has a lower time complexity on large, sorted lists ✓

d. Binary search can find multiple instances of the target element

Question **9**

Incorrect

Mark 0.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 100; What are the mid values(corresponding array elements) generated in the first and second iterations?

a. 89 and 94

b. 90 and 100 ✗

c. 94 and 99

d. 90 and 99

Question **10**

Correct

Mark 1.00 out of 1.00

_____sort is the simplest sorting algorithm that works by repeatedly swapping the adjacent elements in case they are unordered in n-1 passes.

a. Complexity

b. Selection

c. Insertion

d. Bubble ✓

Question **11**

Correct

Mark 1.00 out of 1.00

_____ search takes a sorted/ordered list and divides it in the middle.

a. Binary ✓

b. Hash

c. Both (1) & (3)

d. Linear

Question **12**

Correct

Mark 1.00 out of 1.00

Which method of searching involves sequentially comparing each element until a match is found?

a. Linear search ✓

b. Binary search

c. Hashing

d. Jump search

Question **13**

Correct

Mark 1.00 out of 1.00

Which of the following is a type of searching method?

a. Bubble search

b. Linear search ✓

c. Quick search

d. Merge search

Question **14**

Correct

Mark 1.00 out of 1.00

In a linear search, how many comparisons are made in the worst-case scenario to find an element in a list of size n?

a. 1

b. n/2

c. log n

d. n ✓

Question **15**

Correct

Mark 1.00 out of 1.00

If the target element is greater than the middle element in binary search, where does the search continue?

a. In the left sublist

b. At the beginning of the list

c. In the middle of the list

d. In the right sublist ✓
